

METABOLIC *Manna*

EDITED 2026

A FREE 7-DAY PRINTABLE COMPANION

The 7-Day Meal + Move *Tracker*

Two science-backed moves — food order and a short post-meal walk — tracked one day at a time. Grounded in peer-reviewed research. Built for the body you've already been given.

METABOLICMANNA.COM

TWO MOVES, ONE WEEK

Same food. *Smaller* spike.

Most metabolic advice asks you to overhaul what you eat. The two moves in this tracker ask something simpler — change the *order* you eat in, and add a *short walk* after the meal. Same food. Same calories. Different result in published trials.

Neither move requires a continuous glucose monitor, a supplement, or a religion. They are two of the cleanest, lowest-friction findings in the post-meal glucose literature, and they are what this tracker is built around.

MOVE 01 • SEQUENCING

Vegetables and protein *before* carbs.

In a 2019 trial of adults with prediabetes (Shukla et al.), eating vegetables and protein first and saving carbohydrates for last reduced the incremental glucose peak by up to 54%. A 2015 study in adults with type 2 diabetes showed approximately a 29% reduction at 30 minutes.

SHUKLA 2015 • SHUKLA 2019

MOVE 02 • WALKING

A 10-minute walk *within fifteen minutes*.

In a 2016 trial of 41 adults with type 2 diabetes (Reynolds et al.), three 10-minute post-meal walks lowered post-meal glucose by ~12% overall and ~22% after dinner. A 2023 meta-analysis (Engeroff et al.) found post-meal exercise is significantly more effective than pre-meal exercise.

REYNOLDS 2016 • ENGEROFF 2023

HONEST EXPECTATIONS

The largest effects in these studies were observed in adults with type 2 diabetes or prediabetes. Healthy adults transiently spike above 140 mg/dL after typical meals — that's normal physiology (Shah 2019). Individual responses vary. If you have diabetes, are on glucose-affecting medication, or have any condition involving blood sugar, talk to your healthcare provider before changing how you eat or exercise.

A SHORT MANUAL

Five things, then *start*.

*i***Each day has three meal slots.**

Use them however your day actually runs — three meals, two meals plus a snack, or one big meal. Empty slots are fine.

*ii***Mark "sequenced ✓" if vegetables or protein came first.**

Salad before pasta. Eggs before toast. Soup before sandwich. The first few bites being non-carb is what counts.

*iii***Mark "walked ✓" if you walked 10+ minutes after.**

Within about 15 minutes of finishing the meal is the window the literature supports most directly. A loop around the block counts.

*iv***Write one win at the end of the day.**

Not a graded report. Just a sentence — what worked, what surprised you, or what you noticed. The reflection matters more than the checks.

*v***Track the pattern. Don't chase the number.**

This is not a glucose monitor and the verses on each page are not a sermon. The body is a gift to steward, not a project to optimize.

DAY ONE • *The temple*

Do you not know that your body is a temple of the Holy Spirit, who is in you, whom you have received from God? You are not your own; you were bought at a price. Therefore glorify God with your body.

THE WEEK, IN ONE LINE

YOU FINISHED

The body is *adaptable.* The pattern is *yours* now.

Seven days of food order and post-meal walking. The research says small things, done the same way many times, change the curve more than big things done once. You just proved it on yourself.

Metabolic Manna is built by a Christian creator on the belief that the body is a gift worth stewarding, and the evidence for what works is clearer than the wellness industry wants you to think. Thank you for trusting us with your week.

NEXT STEP — OPTIONAL

Try the Meal + Move *Coach*.

Free educational tool. Tell it about a meal, see what published research says about food order and post-meal walking. No predictions, no medical advice. protocol.metabolicmanna.com
